PREFACE.

This table, though the shortest ever computed, is complete, accurate, simple, and universal—embodying all the valuable features of the best works on the subject heretofore published, besides a number of important improvements peculiar to itself.

The author, in presenting it to the public, hopes he has in some degree simplified and rendered less irksome the computations in percentage.

To the expert this table will prove a "shorter cut," and to those who are "rusty" an easy method of finding interest.

The equation table is based on a scientific and simple principle and will render plain that most perplexing of book-keepers' duties, averaging of bills and accounts.

☞ The method of using the table will be easily and fully understood from a careful examination of the explanations and examples. R. A. C.

St. Louis, 1875.

EXPLANATIONS

OF

INTEREST TABLES.

These tables are based on the rate of ten per cent. per annum of 365 days. The interest is computed as indicated by the large figures at the head of the columns on from $1 to $9. The columns of large figures running down the sides and centre of each page indicate the number of days and increase from 1 to 365. The columns of small figures give in cents and fractions of cents the amount of interest on $1 up to $9 for the number of days indicated in the same line by the large figures. To illustrate: Turn to the first page of the table opposite 50 in the column of large figures, and we find in the first column of small figures $0.01 3698 (1 cent and 3698 one ten-thousandths of a cent) as the interest at ten per cent. on $1 for 50 days. In the $2 column, on the same line, we find $0.02 739 (2 cents and 739 one-thousandths of a cent), which is the interest on $2 for the same time and rate. The $3 column on the same line gives $0.04 109 (4 cents and 109 one-thousandths of a cent), which is the interest on $3 for the same time and rate. Continuing along on the same line we obtain the interest on $4, $5, $6, $7, $8 and $9 respectively. Having found, for example, the interest on $8 for 50 days to be $0.10 958 (10 cents and 958 one-thousandths of a cent), we may find the interest on $80 by moving* the decimal point one place to the right; on $800 by moving the decimal point two places to the right, and on $8,000

* The interest on $80 is ten times as great as the interest on $8; that on $800 is one hundred times as great as that on $8; and on $8,000 is one thousand times as great as that on $8; and hence we have only to multiply by 10, 100 or 1000 as the case may be in order to find the answer sought. This multiplication is accomplished by moving the decimal point one, two or three places to the right, according as we desire to multiply by either 10, 100 or 1000.

by moving the point three places, producing as results: Interest on $80, $1.09 58 (or $1 10, as it is nearer 10 than 9 cents); for $800, $10.96; and for $8,000, $109.58.

The method of finding the interest on sums over $9 and under $20,000* is explained by the following examples:

EXAMPLE I.

What is the interest on $30 *for* 89 *days at* 10 *per cent?*

In the $3 column, opposite 89 in the column of days, we find $0.07 315 (7 cents and 315 one-thousandths of a cent). Moving the decimal point one place to the right and we have $0.73 15 (or 73 cents), the answer required.

EXAMPLE II.

Principal, $600. 66 *days at* 10 *per cent.*

We find from the table that the interest for 66 days on $6 is $0.10 849 (10 cents and 849 one-thousandths of a cent). Moving the decimal point two places to the right and we have $10.85 the answer.

(The interest on $600 for 66 days is one hundred times as much as the interest on $6 for the same time, and hence $0.10 849×100=$10.849, or $10.85.)

EXAMPLE III.

Principal, $4,000. 122 *days at* 10 *per cent.*

We find from the table that the interest for 122 days on $4 is $0.13 369 (13 cents and 369 one-thousandths of a cent), moving the decimal point three places to the right and we have $133.69 the answer.

(The interest on $4,000 for the same time must be one thousand times as much as the interest on $4, and hence $0.13 369×1000=$133.69.)

EXAMPLE IV.

Principal, $4,536. 122 *days at* 10 *per cent.*

We first find the interest on $4,000, then upon $500, then upon $30, and then upon $6, in accordance with the examples given above, and find the following results:

---

* The interest on sums between $20,000 and $200,000 will be found in the same manner as on less amounts *by annexing to the answer the figure* 5 *in the column of cents.*

Interest on	$4,000	for	122	days,	-	-	$133.69
" "	500	"	"	"		-	16.71
" "	30	"	"	"	-	-	1.00
" "	6	"	"	"		-	.20
" "	$4,536	"	"	"	Answer,		$151.60

EXAMPLE V.

Principal, $7,777. 47 *days at* 10 *per cent.*

We select the above to render the use of the decimal point more easily understood.

Interest on	$ 7	for	47	days,	-	-	.09
" "	70	"	"	"	-	-	.90
" "	700	"	"	"	-	-	9.01
" "	7,000	"	"	"	-	-	90.13
" "	$7,777	"	"	"	Answer,		$100.13

From the above it will be observed that *we move the decimal point* as found in the table *one place to the right for every cypher in the principal*, as analyzed.

EXAMPLE VI.

Principal, $18,900. 127 *days at* 10 *per cent.*

Interest on	$10,000	for	127	days,	-	-	$347.94
" "	8,000	"	"	"		-	278.35
" "	900	"	"	"	-	-	31.31
" "	$18,900	"	"	"	Answer,		$657.60

EXAMPLE VII.

Principal, $425 60. 195 *days at* 10 *per cent.*

Interest on	$400.00	for	195	days,	-	-	$21.37*
" "	20 00	"	"	"		-	1.07
" "	5.00	"	"	"	-	-	.27
" "	.60	"	"	"		-	.03
" "	$425.60	"	"	"	Answer,		$22.74

It will be noticed from the above that in order to find the interest on the sixty cents we first found the interest from the

* As the fractions here are over half a cent, add one to the terminal figure.

table for the time required on $6 and then moved the decimal point one place to the *left*, which gave .03 (three cents) as the interest on sixty cents for 195 days.

To Find the Interest at any other Rate.

RULE.—First find the interest from the table, move the decimal point one place to the left, and multiply by the required rate of interest. The product will be the answer sought.

EXAMPLE I.

Principal, $356. 76 *days at* 7 *per cent.*

We first find the interest at 10 per cent. from the table, as follows:

Interest	on	$300	for	76	days,	-	-	-	$6.25
"	"	50	"	"	"	-	-		1.04
"	"	6	"	"	"	-	-	-	.12
"	"	$356	"	"	"	-	-	-	$7.41

Having found the interest at 10 per cent., we now in order to find the interest at the rate of 7 per cent. take (7-10) seven-tenths of that amount: $7.41÷10=0.74 cts. and .74×7=$5.18, the answer required.

NOTE.—Dividing the ten per cent. interest by ten, gives *one* per cent., and multiplying by seven gives *seven* per cent.

EQUATION TABLE.

Having explained the method of computing interest by means of the Interest Table, let us now illustrate the use of the Equation Table. Our focal date is January 1st.

RULE.—Compute the interest on each bill from the 1st of January to the date of purchase, as found in the Interest Table opposite that date. Add together the items of interest thus obtained and annex two ciphers and divide this result by the sum of the bills, omitting the cents. Look for the quotient in the $1 column, (*omitting the two right hand figures of that column,*) and the date opposite in the "forward" column will be the *average* date required.

NOTE.—It is usual in equating accounts to omit the cents from the items of the account if less than fifty, or include them as another dollar, if more than that amount.

EXAMPLE I.

What is the average date of the following bills?

1874.	Bills.	Interest.
January 20	$400	$ 2.08
February 10	350	3.84
March 17	200	4.11
May 8	500	17.40
	$1,450	$27.43

1450)274300(120 quotient.

Turning to the $1 column we find the quotient 120 (54 the two right hand figures of that column being omitted) opposite *Feb.* 14, in the "forward" column, and this is the *average* date of the above bills and the answer sought.

EXAMPLE II.

What is the average date of the following bills?

1874.	Bills.	Interest.
September 22	$200	$14.46
" 30	300	22.36
November 6	400	33.86
1875.		
January 15	100	.38
February 5	200	.02
	$1,200	$71.08
Interest on 2d year's items ($300) 365 days,		30.00
		$101.08

1200)1010800(842 quotient.

Looking down the $1 column we find the figures opposite 307 days to be the *nearest* equal to the quotient, and this indicates *Nov.* 4 of the first year (1874) as the *average* date required.

EXAMPLE III.

Required—The average *due* date of the following bills:

1874.		Bills.	Interest.
January 20	30 days,	$700	$3.64
" 30	" "	900	7.15
February 15	" "	600	7.40
March 5	" "	500	8.63
		$2,700	$26.82

2700)268200(99 quotient.

Looking down the $1 column we find the figures opposite 36 days to be the *nearest* equal to the quotient (99), and this indicates *Feb.* 6, but as the bills had 30 days to run we add 30 days to Feb. 6 and have *March* 8, as the *average due date*, which is the answer required.

EXAMPLE IV.

Required—The average *due* of the following bills:

1874.		Bills.	Due.	Interest.
May 15	90 days	$300	August 13	$18.41
" 25	3 months	400	" 25	25.86
June 7	Cash	100	June 7	4.30
" 20	60 days	700	August 19	44.11
		$1,500		$92.68

1500)926800(617 quotient.

The interest is computed on each bill up to the time each was due. Looking down the $1 column, as before, we find the figures nearest the quotient 617 to be opposite 225, showing *Aug.* 14 as the *average due* date required.

EXAMPLE V.

Required—The average *due* date of the following bills:

1874			DR.	1874		CR.
Jan 26.	To Mdse.	60 days,	$200	Feb. 11,	By Cash,	$ 50
Feb. 15,	"	"	300	March 15,	"	200
April 7	"	"	100	April 5	"	50
" 20	"	"	400			

Balance of account, 700) bal. of interest, 302400(quotient. 432

Interest is computed from the table on each bill and each credit from January 1st, and a balance ($30.24) is struck between the totals of interest. Then divide the balance of interest (first annexing two cyphers,) by the balance of account. The quotient, 432, gives us 158 days, which is opposite *June* 8, a "forward" date, *because the balance of account and the balance of interest are on the same side of the ledger.* Average due date, *June* 8, 1874, the answer required.

See statement and solution on the next page.

EXAMPLE V.—STATEMENT AND SOLUTION.

1874.	DR.	Bills.	Interest	1874.	CR.		Interest.
January 26	To Mdse., 60 days	$200	1.37	February 11	By Cash, -	$ 50	$ .56
February 15	" "	300	3.70	March 15	"	200	4.00
April 7	" "	100	2.63	April 5	"	- 50	1.29
" 20	" "	400	11.95		Balance of account, - -	700	
Interest on total of bills ($1,000), 60 days			16.44		Balance of interest, - - -		30.24
		$1,000	$36.09			$1,000	$36.09

EXAMPLE VI.—*Required*—The average *due* date of the following account:

1874	DR.	Bills.	Due.	Interest.	1874	CR.		Interest.
Jan. 20,	To Mdse. 30 days	$ 100	Feb. 19,	$1.34	Mar. 22,	By Cash,	$ 50	$ 1.09
May 1,	" 60 "	300	June 30,	14.79	Sept. 8,	" - -	100	6.85
Sept. 5,	" 4 mos.	200	1875 Jan. 5,	.22	1875 Feb. 25,	" - -	200	3.01
1875 Feb. 20,	" 30 days	400	March 22,	8.77		Interest on $200 for 1 year,		20.00
Mar. 20,	" Cash	1,000	" 20,	21.37		Balance of account, -	1 650	
Interest on 2d years items, $1600 for 1 year,				160.00		Balance of interest, - -		175.54
		$2,000		$206.49			$2,000	$206.49

Balance of account, 1650) Balance of interest, 1755400(1063 quotient.

A quotient of 1,000 represents one year, hence we drop 1,000 and find the average due of the remainder, dating it in the *second year*. The remainder 63 we find opposite January 24. Hence the *average due date* required is *January* 24, 1875.

Balance of Interest and Balance of Account on opposite sides of the ledger.

Illustrating use of "Backward Date" Column.

EXAMPLE VII. *Required*—The average *due* date of the following account:

1874.	Dr.	Bills.	Interest.	1874.	Cr.	Bills.	Interest.
Jan. 26.	To Mdse. 60 days	$200	$1.37	Mar. 31,	By Cash	$ 50	$ 1.22
Mar. 15,	" "	200	4.00	June 20,	" - -	100	4 66
April 7,	" "	100	2.63	July 1,	" - - -	300	14.88
As the bills were bought upon 60 days time add 60 days interest to total of bills ($500) - -			8.22		Balance of account,	50	
Balance of interest, - -			4.54				
		$500	$20.76			$500	$20.76

Balance of account, 50) Balance of interest, 45400 (908 quotient.

We find the quotient opposite 332 days, and look for the corresponding date in the "backward column" of the Equations, *because the balance of account and the balance of interest are on opposite sides of the ledger*, and we find the *average due* date to be *February* 3 of the *preceding year* (1873), which is the answer required.

EXAMPLE VIII.—*Required*—The average *due* date of the following account:

1874	Dr.		Bills.	Due.	Interest.
Jan. 20,	To Mdse.	30 days	$ 100	Feb. 19,	$1.34
May 1,	"	60 "	300	June 30,	14 79
				1875	
Sept. 5,	"	4 mos.	200	Jan. 5,	.22
1875					
Feb. 20,	"	30 days	400	March 22,	8.77
Mar. 20,	"	Cash	1,000	" 20,	21.37
Interest on 2d years items, ($1,600) for 1 year,					160.00
Balance of Interest					8.57
			$2,000		$215.06

1874	Cr.		Interest.
Mar. 22,	By Cash,	$ 50	$ 1.09
Sept. 8,	" -	100	6.85
1875			
Feb. 25,	" - -	1,800	27.12
In erest on 2nd years credits ($1,800) for one year,			180.00
Balance of account,	-	150	
		$2,000	$215 06

Balance of account, 150) Balance of interest, 85700(571 quotient.

As the Balance of Account and the Balance of Interest are on *opposite* sides of the Ledger we know that the Quotient (571) will indicate a "*backward* date." Running down the $1 column of the table we find 571 nearest opposite 209 days, which gives us in the equation column ("backward date") *June* 6, 1873, as the average *due* date of the balance $150, as required.

EXAMPLE IX. *Required*—The Interest Balance and the Cash Balance on the 15th of August, 1874, at the rate of 10 per cent. interest.

1874.	Dr.		Interest.	1874.	Cr.		Interest.
Jan. 25,	To Mdse.	$200	$ 1.31	April 15,	By Cash	$100	$ 2.85
Feb. 10,	"	300	3.29	May 30,	"	200	8.16
Mar. 15,	"	100	2.00	June 10,	"	200	8.77
April 10,	"	300	8.14	Aug. 15,	balance of account	400	24.77
Aug. 15,	to balance of interest		29 81				
		$900	$44.55			$900	$44.55

Aug. 15, To Bal. of Acct. brought down	$400.00
" " " Inter'st " "	29.81
To Cash Balance - - -	$429.81

We first compute the interest on each item on both sides of the ledger as in previous example; and the interest on *balance of account* ($400) from January 1st to the assumed day of settlement (August 15) which we find to be $24.77. We now find the balance of interest to be $29 81, which added to the balance of account $400 gives $429.81 as the *Cash Balance*, thus obtaining the answers sought.

Were any other rate of interest required, say 7 per cent., we would divide the above balance of interest by 10, which gives $2.98, and then multiply by 7, giving $23.86 as the Interest Balance, and the Cash Balance would then be $423.86.

GENERAL OBSERVATIONS.

In the foregoing examples our *focal date* (date to which averaged accounts are referred) is January 1st. Any other day may be se'ected as a focal date, as for example, the first or last date of the account, but in operating these tables the date we have selected will be the most convenient.

In averaging an account, such as Example V, be careful to compute the interest on the *total of bills* for the term of credit allowed, and not upon the *balance* of the account; for the time is allowed on the bills and not on the balance.

When the balance of account and the balance of interest are on the *same side* of the ledger, the average date will be "*forward.*"

When the balance of account and the balance of interest are on *opposite sides* of the ledger the average date will be "*backward.*"

When the balance of account is small as compared with the balance of interest, as in Example VIII., and these balances are on opposite sides of the ledger, the average due date of the balance of account is carried proportionately back. In Example VIII, the question is: How far back must a note be dated so that the balance of account ($150) at 10 per cent. interest, will earn $8.57 (the interest balance)? It requires 209 days for $150 to earn $8.57 interest, and therefore the date required is, as we have seen, *June* 6th.

TIME TABLE.

When it is desired to ascertain the day upon which a bill matures we look for the date in the Equation "forward" column and then add to the figures opposite, the number of days that the bill has to run. For example: If the bill is dated February 10th, and to run 90 days, we find in the table that February 10th is opposite 40, and adding 90, we have 130 as the number to look for, opposite which we find May 11th, the date required.

If it is desired to ascertain the number of days between two dates, we take the difference between the numbers opposite the

dates in the table. To illustrate: How many days between March 10th and July 6th of the same year? The number opposite March 10th is 68 and the number opposite July 6th is 186, and the difference is 118, the required answer.

When it is desired to ascertain the number of days a given date is from the preceding 1st day of January and the succeeding 1st day of January—the method is very simple. To i lustrate: How many days from January 1st, 1875, is May 9th, 1875, and how many days is it from January 1st, 1876? We find from the Equation Table that May 9th is 128 days from January 1st, preceding, and 238 days from the following January 1st.

LEAP YEAR.

In all cases in which *February* 29 occurs between the dates considered, an allowance of one day must be made when using the table.

N. B. All notes or accounts dated before and maturing after February 29 (leap year,) become due one day *earlier* than shown in the table.

The number of days between two dates, one preceding and the other following February 29 (leap year,) is one *greater* than shown in the table.

1 TO 50 DAYS

DAYS	$1	$2	$3	DAYS	$4	$5	$6	DAYS
1	.00 0273	.00 054	.00 082	1	.00 109	.00 136	.00 164	1
2	.00 0547	.00 109	.00 164	2	.00 219	.00 273	.00 328	2
3	.00 0821	.00 164	.00 246	3	.00 328	.00 410	.00 493	3

AGENTS WANTED!

Who can have profitable employment in selling the following publications:

CAMPBELL'S UNIVERSAL INTEREST AND EQUATION TABLES, Based on ***365*** days per annum, and also based on ***360*** days per annum, are endorsed by all who have examined them, as the most concise, simple, and complete Interest Tables published, and without a rival in the ease, rapidity and accuracy with which interest is determined and accounts equated.

CAMPBELL'S GAZETTEER OF MISSOURI, 800 pages 8vo., Illustrated with Maps and Engravings, is the standard of information concerning the State.

CAMPBELL'S ATLAS OF MISSOURI, the largest, most accurate and elegant State Atlas published.

FOUR GOSPELS IN ONE, Containing every statement in Matthew, Mark, Luke and John, in exactly the words of the authorized version, By R. A. CAMPBELL.

GOVERNMENT OF ILLINOIS, and several Western and Southwestern States—In press.

Address;

CAMPBELL & CADMAN,

Publishers, St. Louis.

APPENDIX.

The following table is based on

10 PER CENT. FOR 360 DAYS,

And gives results that are *one seventy-second* more than those given by the table based upon 365 days to a year. The difference between the two tables is such, that by the first, the interest on $60 for 44 days is 72 cents—and by the second it is 73 cents. By the first table the interest on $4,000 for 90 days is $98.63, and by the second it is $100.00, a difference of $1.37.
